Données SUM'Eau - détail par station

Ces données présentent la surveillance du Sars-Cov-2 dans les eaux usées dans 54 collectivités.

Les données ouvertes et leur description se trouvent au lien suivant : <https://www.data.gouv.fr/fr/datasets/surveillance-du-sars-cov-2-dans-les-eaux-usees-sumeau/>

Les valeurs sont calculées à partir du ratio entre la concentration de SARS-CoV-2 (cg L-1) et la concentration de NH_4^+ (mg L-1) dans les eaux usées. Les données sont ensuite modifiées en utilisant une régression de type LOESS, ce qui explique que les valeurs peuvent changer entre les mises à jour.
